

GLOBALWORTH TOWER

ROUMANIA

THE PROJECT AND SADEV® CONTRIBUTION

The “**Bucharest One**” tower project, recently renamed as the “**Globalworth Tower**” is a springboard in the development of a new area located in the North growing zone of Bucharest. This project was developed by Corinthian Five, a Greek promoter, specialized in investments in the countries of central and eastern Europe.

THE PROJECT

The whole development represents 75 600 m² of business offices and other activities on 24 floors.

The Bucharest One tower was designed by the Romanian agency Architects-service, who received the Leed Platinum Green classification.

SADEV-LUCANIK CONTRIBUTION

Excluding the **specials canopies** and the **facades in insulated glazing**, SADEV, through its agent Lucanik,

© Vlad Patru

also equipped the **exterior stairs' glass structure**. The solution chosen for this façade was a non-drilled system. The rotules are stuck on the glass thanks to a dedicated solution developed and tested by Sika Romania.

Each of the **2 510 glass panels** (of 4 380 x 1 330 dimensions) are maintained by 10 special rotules type **R1006 Sika** (90 mm of length).

The special conditions of the installation due to the oversized height needed advanced calculations.
