Architettura&Structure

- SABCO PROFILES HAVE BEEN TESTED TO WITHSTAND ULTIMATE WINDS OF OVER 290 KM/H (4200 Pa)
- DIFFERENT BENDING RADIUS FROM 5 TO 10 METERS.

SADEV provided 2400 linear meters of SABCO curved guardrails, with different radius from 5 to 10 meters.

- These SABCO profiles have been tested to withstand ultimate winds of over 290 km/h (4200 Pa)
To resist the high wind loads that a tower of this height located by the sea can encounter.
