TERRELL

- THIS PROJECT REQUIRED 2,600 ML OF SABCO GUARDRAILS

## The Paris-Longchamp racecourse gets a new look with a new architectural jewel

Dominique Perrault has successfully metamorphosed this historic site.

After 2 years of work, the internationally renowned Parisian racecourse will once again be able to welcome the public from April 29, 2018. It is thus 160 years after its first inauguration that the historic building of Paris Longchamp is changing its appearance and modernizing under the supervision of France Galop.

The restoration of the infrastructure was supervised by Bouygues Construction.

### The role of SADEV

Our glass guardrail SABCO 7019, is tested and validated for resistances from 5.1 to 10KN, this product was developed for the stadium stands allowing to guarantee the safety of the visitors in places of affluence as here for the stands of the racecourse.
