▪ THIS PROJECT REQUIRED 600 ML OF SABCO RAILINGS IN GOLD FINISH

Located in the heart of the 8th arrondissement of Paris, the central business district, this 8-story building has a magnificent

This 8-story building has a magnificent 300 m² rooftop on the 9th floor.

Covea commissioned the DTACC architectural firm to carry out this major restructuring and to rework the architecture, taking inspiration from the «Moebius strip». The glass ribbon of the resolutely modern aluminum facade winds around itself and forms an inverted cone.

It is therefore natural that SABCO glass railings were chosen to ensure the safety of people. They underline the features of the building with a custom-made «golden» treatment but disappear thanks to the transparency of the glass.

The role of SADEV

To ensure an essential safety function, but also to accompany the architectural choice. The SABCO guardrail disappears to highlight the plant life and serve the environment and the well-being of the employees, who will have the chance to enjoy the flowers, the change of plant colors and the unobstructed view of the Eiffel Tower, all year long.
